

SUMMARY

Humble forever student developing and sharpening my skills in software engineering. Currently working as Data Analyst at Tandia Financial intuition, graduating from Sheridan College in Augst 2026, with strong experience in **data driven development**, software development, Ai agentic development, and C#. **Burlington resident** who values **in-person collaboration** and has developed deep understanding of software engineering and architecture. Proven **project management** and **team building** skills passionate about translating **business requirements** into robust technical solutions.

TEECHNICAL SKILLS

Languages & Frameworks:

.NET C# • Python • SQL • Power BI (advanced) • JavaScript / TypeScript (advanced) • Kotlin • Swift • Node.js • React • Figma • Visual Paradigm

Methods & Collaboration:

Agile (Scrum)• Project Management• Project planning
Cloud & DevOps:
Microsoft Azure • AWS • Git • Azure DevOps • Jira • CI/CD • REST APIs

Data & Automation:

Excel • Data Modeling • Predictive Modeling (ML) Visualization • Business Intelligence • Report Automation

CORE COMPETENCIES

- Full-Stack Development & Problem-Solving
 - Mobile Development & Quality Assurance
 - Customer-Focused Solution Design
 - Agile Team Collaboration
 - Technical Documentation & Communication
 - Continuous Learning & Adaptability
- Soft Skills:** Feedback Receptive, User Oriented, Results Driven, Goal Oriented

EXPERIENCE

Junior Data Analyst

Aug 2026 - Dec 2026

Tandia Financial | Hybrid

Tandia Financial is driven to lead the co-operative banking movement by delivering unparalleled products and services through a mutually rewarding relationship with our members and the communities we serve.

Full-time temporary employment in addition to current responsibility I am taking the role of data engineering:

- Restructuring data warehouse, cleaning the data by creating pipelines,
- Working with staff to create python scripts to automate repetitive tasks

IT Student – CO OP

May 2026 - July 2026

Tandia Financial | Hybrid

Tandia Financial is driven to lead the co-operative banking movement by delivering unparalleled products and services through a mutually rewarding relationship with our members and the communities we serve.

Grateful to be working at Tandia as a Data Analyst alongside a Senior Software Developer. Some of what I've been doing:

- Translating stakeholders' requirements into interactive visualizations
- Participating in ongoing meetings to improve, validate, and refine the user experience
- Migrating from an MIS reporting system to paginated reports and Power BI Service (completed related coursework along the way)
- Reviewing data model architecture against best practices
- Partnering with the marketing department to standardize Power BI themes and visual components
- writing a python script for more customized tasks,
- Exploring the DBMS to build a comprehensive understanding of the data structures

Software Developer (intern)

Jan 2026 - Apr 2026

Linkify | Remote

Linkify Solutions builds enterprise-grade custom software for businesses worldwide. Creating software and tools that helps e-commerce store upgrade their services with as little as one-click

Using best practices of Agentic software development to build, improve and test three Shopify applications:

- Create LLMs.txt application from scratch as to help AI-agents read merchandise's product and collections from single page with filtering, analytics and customization of product and data
- Created a project capable of backing-up the whole e-commerce store data into .csv and JSONL as a downloadable backup released with best practices and backend-processes for long running operations, real-time syncs with Minimal cost
- Variant Organizer (Shopify App Store): Rewrote a legacy codebase into a modular, maintainable application with clear separation of concerns and independent UI components; shipped a new major release featuring a redesigned interface and in-app tutorial

EDUCATION

Honours Bachelor of Computer Science (Mobile Computing)

Graduated: August 2026

Sheridan College | Oakville, ON

<https://mikhailajaj.github.io/education/>

COURSES WORK

Capstone Project

Sep 2024 - Dec 2025

PulseShare Blood Donation Management System

Management System for Healthcare:

- Developed comprehensive blood donation management system serving donors, staff, and admin users
- Implemented role-based authentication with custom views, admin invitations, and staff account creation
- Built inventory management system tracking donation processes from booking to completion
- Created analytics and insights features for data-driven organizational decisions

Technical Implementation:

- Frontend Stack: Next.js (React), SwiftUI (iOS), Kotlin (Android)
- Backend: Supabase with SQL database management and REST API integration
- Process Automation: QR code generation, appointment booking, and inventory updates
- Business Intelligence: Analytics dashboard and chatbot for customer support

Real-World Impact:

- Streamlined blood donation workflow from appointment booking to inventory management
- Delivered client-focused solution addressing healthcare sector needs

Project owner/software architect

Jan 2024 - Apr 2024

Secret Santa (invitation system) | Group Project

<https://github.com/mikhailajaj/SecretSanta>

Secret Santa group project, potential project to develop the basic skills required for more advanced project (all links including demo and Figma in the readme file -github)

- *Optimized project management with Jira, significantly increasing development speed and team efficiency.*
- *Created a Visual Paradigm repository, ensuring accuracy and reducing clarification time, which enhanced team collaboration.*
- *Formulated business rules and stakeholder relations, boosting governance and reducing compliance risks.*
- *Designed a Figma prototype to refine UI/UX, receiving early feedback that reduced design revisions.*
- *Standardized development using Git integration, which optimized code sharing and streamlined continuous integration.*
- *Implemented AWS for secure authentication and efficient data management, improving overall system performance.*

Machine learning Activity

Jan 2023 – Apr 2023

Classification | Regression | Clustering | Neural Networks

https://github.com/mikhailajaj/Ai_Classification_Abalone_Sex

- Analyzing, cleaning, preprocessing datasets — one-hot encoding categorical features, handling missing values, and engineering/scaling features (including polynomial transforms) ahead of model training
- Grid-searching and cross-validating classifiers (Logistic Regression, Random Forest, KNN, SVM) and regressors (Ridge, Lasso, Elastic Net), selecting each by accuracy or RMSE

- Applying K-means clustering to recover natural groupings from unlabeled data
 - Designing and compare neural network architectures in TensorFlow/Keras, testing dropout and optimizer choices (Adam vs. SGD) for overfitting
 - Benchmarking classification models with PyCaret on a 3-class sex-classification problem, F1, Cohen's Kappa, and Matthews Correlation Coefficient across 10-fold cross-validation
-

Cloud Economics Activity

Sep 2025 – Dec 2025

Tagging Compliance | Multi-Account Governance | Serverless Cost Optimization

https://github.com/mikhailajaj/AI_Classification_Abalone_Sex

- Building Streamlit/Plotly dashboards to analyze cloud resource tagging compliance and cost governance across simulated multi-account AWS environments
- Identifying untagged cloud spend and designing automated tag-remediation workflows, improving modeled compliance from 72% to 94% across 400+ tracked resources
- Analyzing AWS Lambda t-sizing, provisioned-concurrency tuning, and containerization opportunities across ~95 serverless functions
- Forecasting cost trends with ML-based models and visualizing migration candidates in 3D to support serverless optimization decisions
- Applying FinOps principles — cost visibility, governance, and optimization — aligned with the FinOps Certified Practitioner certification
